ABSTRACT

This project is insight into the design and implementation of an Android College Connect Chat App. Hence to solve this issue we have come up with an android based College Connect Chat application where all the students & teachers can stay connected together on a single platform, thereby helping all the students to be in constant touch with the faculties and making it possible for them to get their problems solved in an instant. Hence, this android-based application will help students to be in contact with their fellow mates & professors all the time without being physically present in a classroom. Without depending on third party application, college have their own intra communication application to connect students and faculties.

ACKNOWLEDGEMENTS

Success in life is never attained single handedly. My deepest gratitude goes to my thesis supervisor, **Dr. Vipin Kumar** for his guidance, help and encouragement throughout my research work. Their enlightening ideas, comments, and suggestions.

Words are not enough to express my gratitude to **Dr. Ajay Kumar Shrivastava**, Professor and Head, Department of Computer Applications, for his insightful comments and administrative help at various occasions.

Fortunately, I have many understanding friends, who have helped me a lot on many critical conditions.

Finally, my sincere thanks go to my family members and all those who have directly and indirectly provided me moral support and other kind of help. Without their support, completion of this work would not have been possible in time. They keep my life filled with enjoyment and happiness.

Mansi Varshney

Yash Kumar

Km Palak

1. Introduction

1.1 Project Description

As we still continue to battle the ongoing Coronavirus pandemic, it has become very difficult for college students to keep in touch with the faculties & professors to get their problems solved. Earlier we had to personally visit the college and had to meet the concerned person to get our queries solved, but the ongoing pandemic has brought a complete halt to this approach & switching to an alternative method has become a dire need nowadays.

Also, it has become very difficult for the college management to convey any important notice or message to all the students as all the college faculty members & students may not be using the same messaging app. Hence to solve this issue we have come up with an android based College Connect Chat application where all the students & teachers can stay connected together on a single platform, thereby helping all the students to be in constant touch with the faculties and making it possible for them to get their problems solved in an instant.

Hence, this android-based application will help students to be in contact with their fellow mates & professors all the time without being physically present in a classroom. And without depending upon any third-party software for communication.

1.2 Project Objective

1.2.1 Messaging

One of the primary uses of K-CHAT is messaging. Just like other social apps, you have a list of conversations that you're engaged in. This feature is pivotal as you can add people in a variety of ways aside the conventional way of details collection. When fully operational, you will be amazed how individuals will have to scan their phones during details collection.

Users of K-CHAT use a phone number to add a person to their contact list and even search for people nearby. And a person who is an esteem member of KIET GROUP OF INSTITUTION.

1.2.2 File transfer

With the sophistication design of the K-CHAT app, individuals will be able to share files without size constraints ranging from images, videos, to large documents files like zip, dmg, and so on. As long as you have a smart phone with android or iOS running on it, it can be linked to your K-CHAT app to achieve this.

The uniqueness of this app is that it works seamlessly with your use case for it and saves you the stress of uploading and downloading the file as the mobile device becomes a host you can download files from with the simple aid of your smart phone at download cost, thereby helping the world become a closer with ease.

1.2.3 Social barrier breaker

With the introduction of the Pidgin English feature, K-CHAT is intended to ensure we all socialize within our limits and create more friends irrespective of our batch and profile.

K-CHAT hopes to rekindle the spirit of humanity in her natural state devoid of privileges some individuals have over others. In conceptualizing this app, careful thought and study has been given to a methodology of really defining the peaceful co-existence of human and, K-CHAT will really serve as a means of promoting and forestalling unity as it helps in defining the place of equality of the human race devoid of sentiment, religion and ethnicity.

1.3 Project Scope

The project successfully delivered on all requirement specification specified by the user. Care was ensured during the design to make sure data integrity is maintained and to avoid all forms of redundancies associated with data.

The user is assured a very friendly interface, behind which there are wide ranging technical details that went in. The user guide is a mere formality because, the project was specially created bearing in mind interaction and designs that would make users feel as though they have used a system such as this.

This project has also been built in such a manner that future changes or modifications that are required can easily be implemented without affecting the functionality of the system. This project is used on android environment, and can be used on any version so it can be used by individuals with different levels of android devices.

The technical document that is provided in the synopsis of this project will help developers understand the internal workings of the system.

1.4 Hardware/ Software Requirements

➤ Hardware –

○ On Smart Phone

- 1) Processor should be dual core.
- 2) Processor speed be 1.3 GHz.
- 3) ROM 1 GB.
- 4) RAM 512 MB.
- 5) Android Version 5.0 Lollipop and above.

○ On Personal Computer (PC)

- 1) Processor should be dual core.
- 2) Processor speed be 1.5 GHz.
- 3) RAM more than 4 GB.
- 4) ROM more than 30 GB.

➤ Software –

- 1) Android Studio.
- 2) Java Language.
- 3) HTML.
- 4) XML.
- 5) Android.
- 6) Firebase.

2. Feasibility Study

Feasibility study is used to check the visibility of the project under the consideration of the theoretical project and its various types of feasibility are conducted below are important which are represented as follows :-

2.1. Technical Feasibility

Technical Feasibility determines whether the work for the project can be done with the existing equipment's software technology and available personals technical feasibility is concerned with the specified equipment and software that will satisfy the user requirement this project is feasible on technical remark also as the proposed system is beneficiary in term of having a soundproof system with new technical equipment's install on the system that proposed system can run on any machine supporting window and work on the best software and hardware that had been used while designing the system so it would be visible in all technical term of feasibility³.

2.2. Economic Feasibility

With manual system the operation cost of this system is about 60 lacs for annual this cost comprises salary of Swiss 25 people's stationary, building rent, electricity water telephone etc. but with a new system this offering cost comes out to be about 20 lacs for renewal and the new system is economically feasible.

2.3. Operational Feasibility

The new solution is possible in all sense but operationally is not the new system demands the explosion of at least 15 people from the company it creates an environment of joblessness and fear among the employees it can lead to indefinite Strike in the company also, so the management must take corrective action prior in advance to start further proceeding.

2.4. Behavioral Feasibility

Behavioral Feasibility is the measure of how the society is looking towards our project, what is the reaction of people who are going to use this in upcoming future.

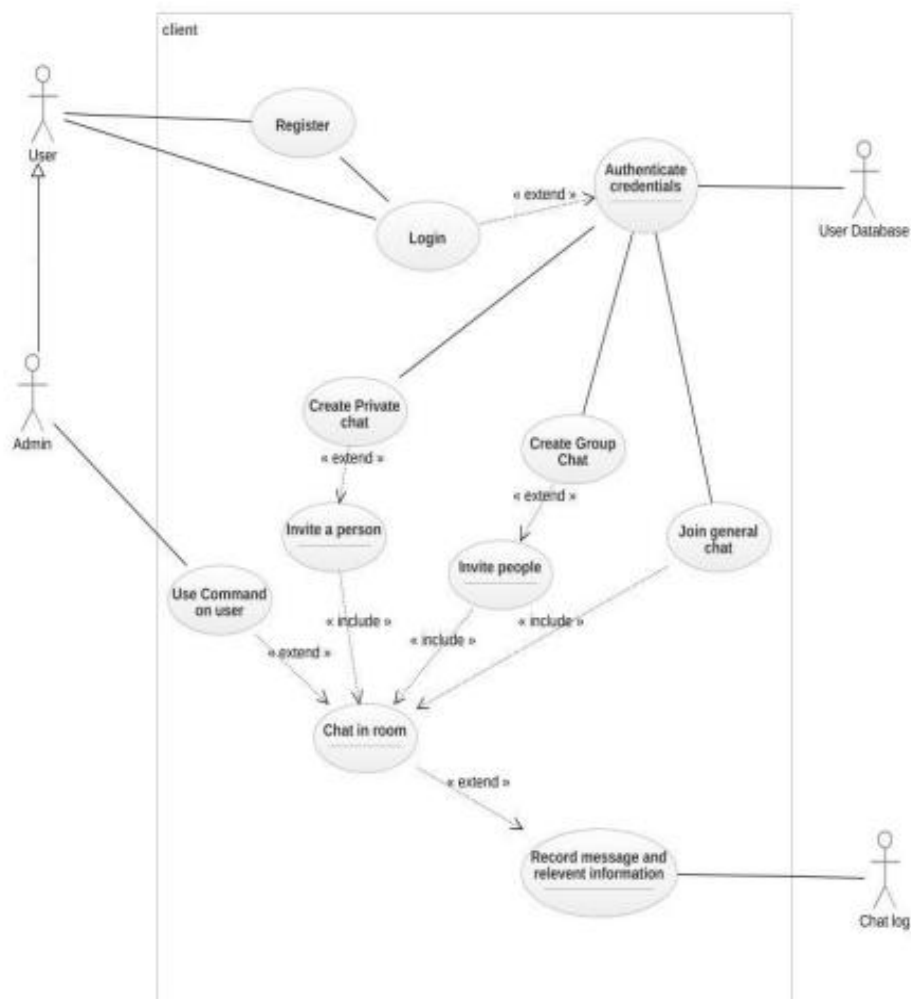

It includes how strong the reaction of user will be towards the development of new system that involves device use in their daily life for connecting with faculties at college.

3. Database Design

3.1. Use Case Diagram

A use case diagram at its simplest is a representation of a user's interaction with the system that shows the relationship between the user and the different use cases in which the user is involved. A use case diagram can identify the different types of users of a system and the different use cases and will often be accompanied by other types of diagrams as well.

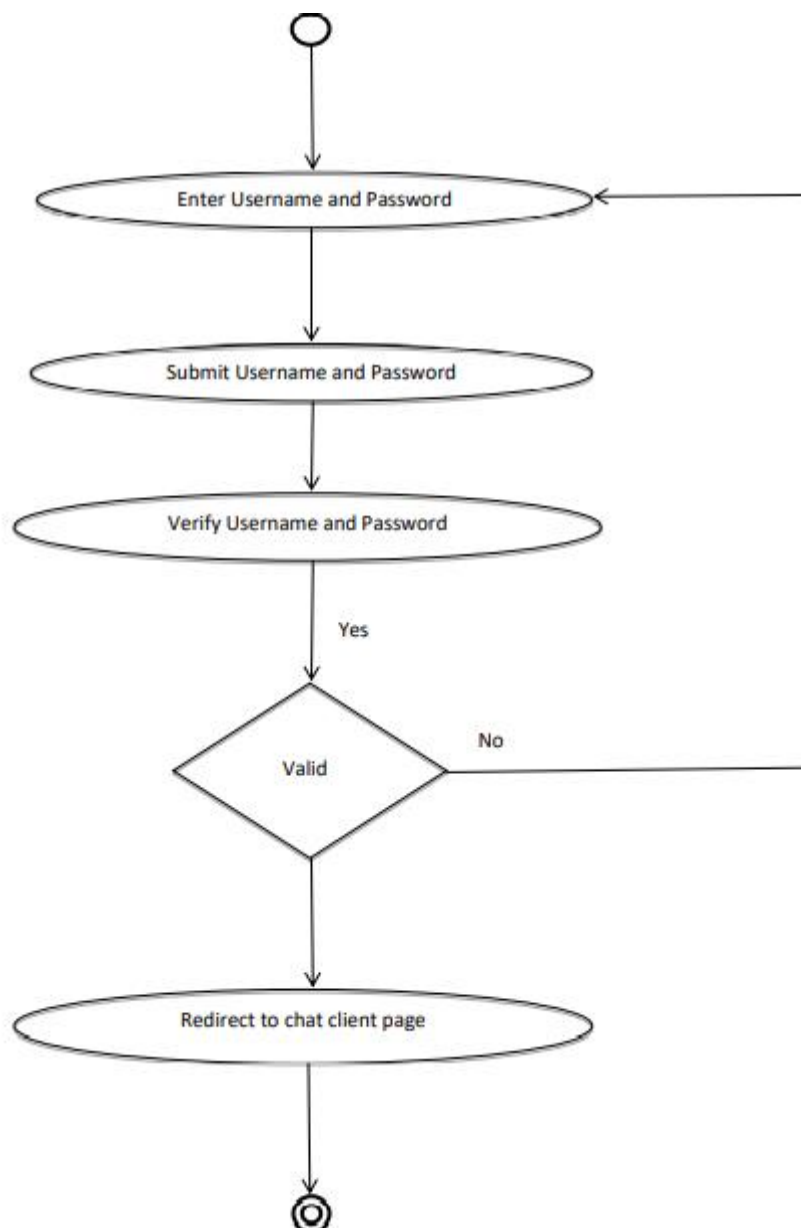

While a use case itself might drill into a lot of detail about every possibility, a use-case diagram can help provide a higher-level view of the system. It has been said before that "Use case diagrams are the blueprints for your system". They provide the simplified and graphical representation of what the system must do.

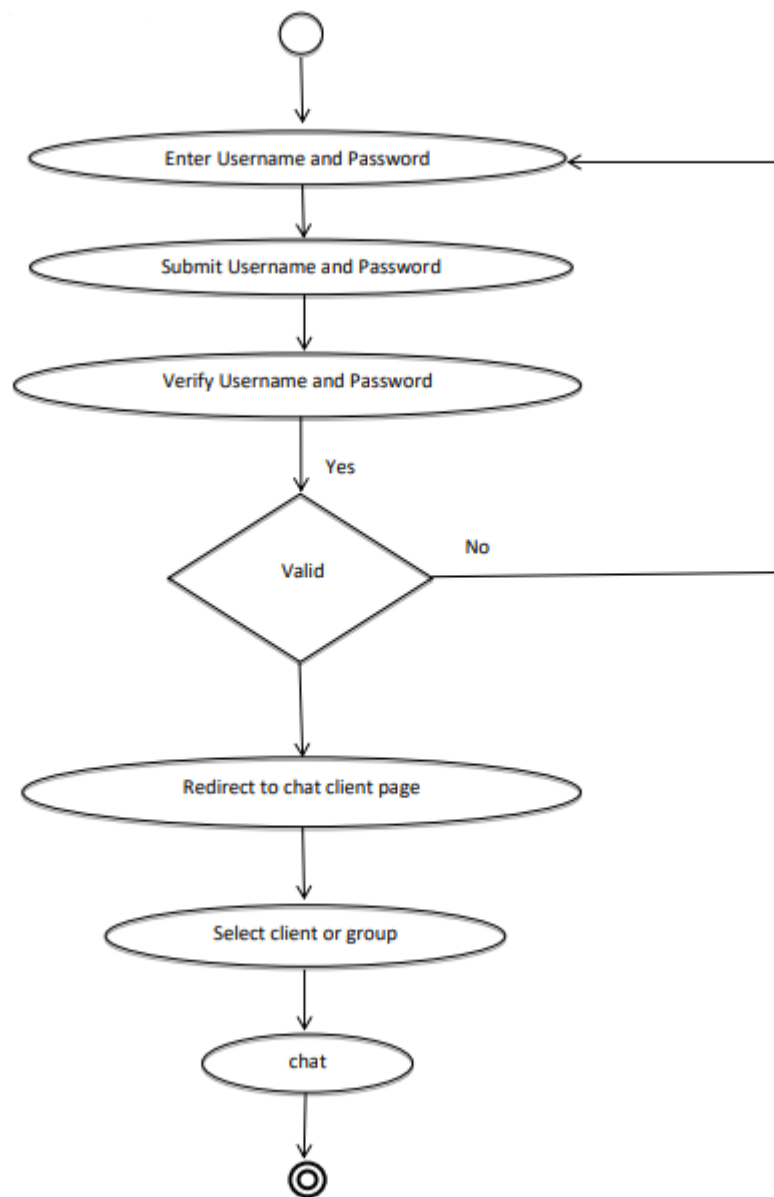

3.2.Activity Diagrams

3.2.1 Login

Activity diagrams are graphical representations of workflows of stepwise activities and actions with support for choice, iteration and concurrency. In the Unified Modeling Language, activity diagrams are intended to model both computational and organizational processes (i.e., workflows), as well as the data flows intersecting with the related activities. Although activity diagrams primarily show the overall flow of control, they can also include elements showing the flow of data between activities through one or more data stores. Activity diagrams can be regarded as a form of a structured flowchart combined with a traditional data flow diagram. Typical flowchart techniques lack constructs for expressing concurrency. However, the join and split symbols in activity diagrams only resolve this for simple cases; the meaning of the model is not clear when they are arbitrarily combined with decisions or loops

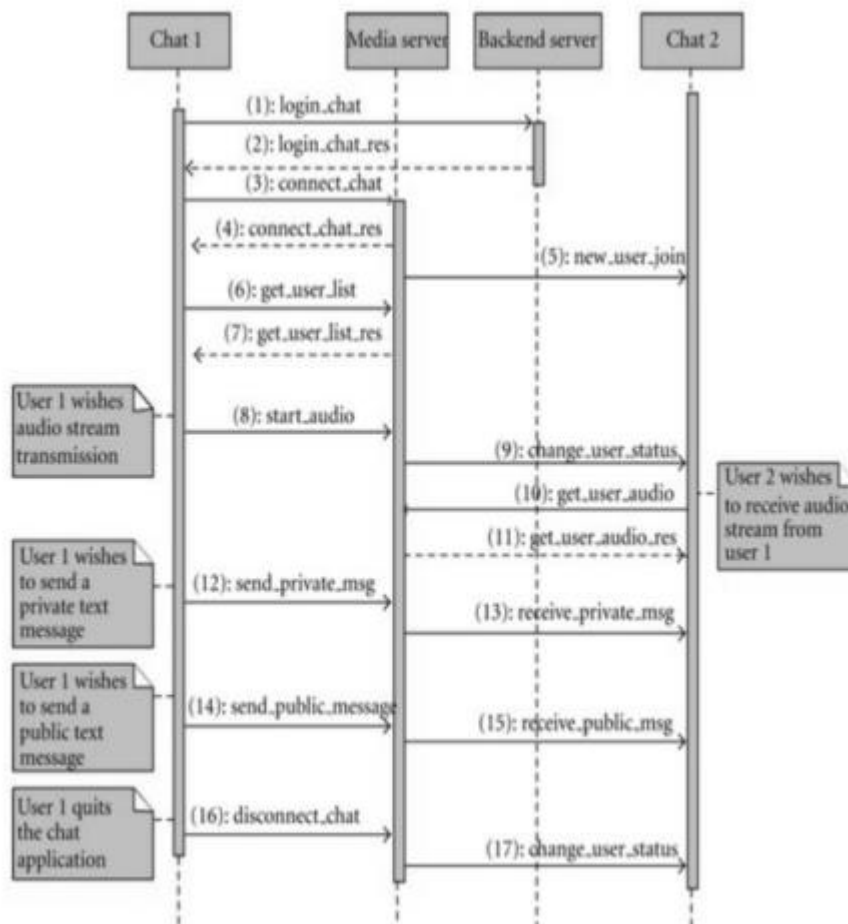

3.2.2 Chatting

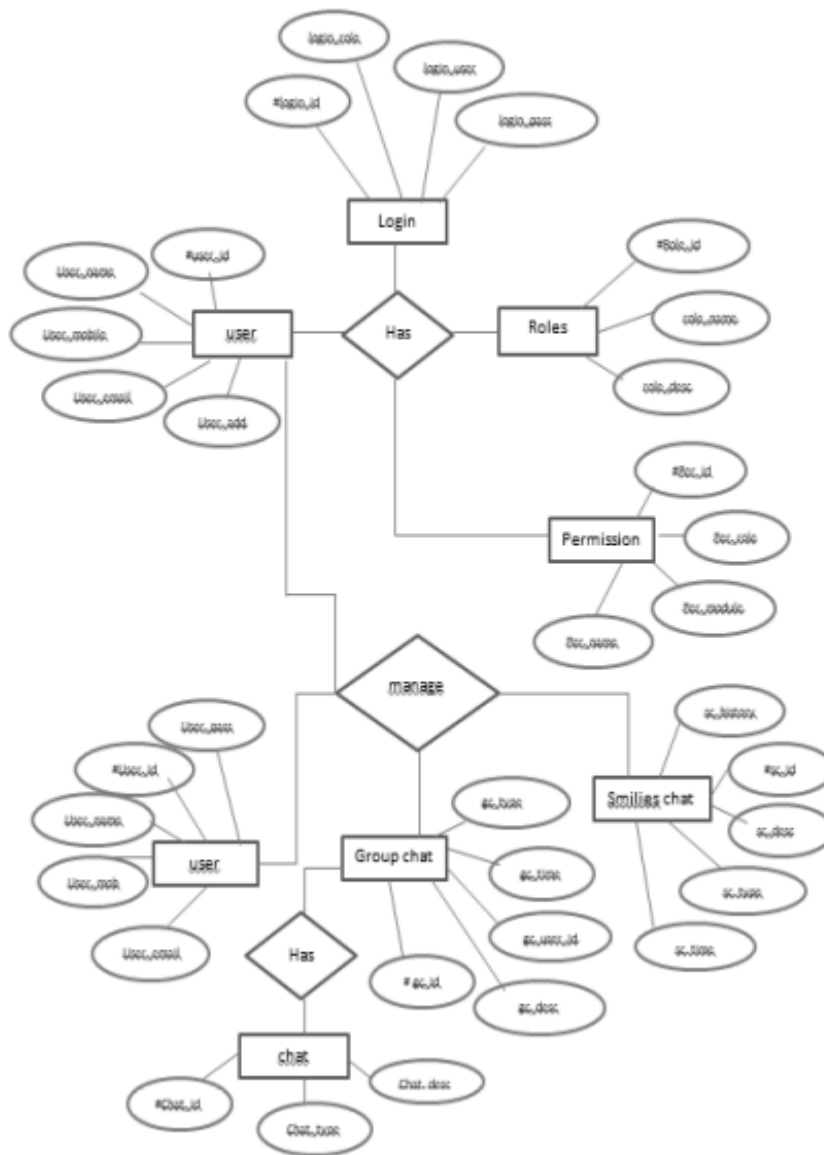

3.3.Sequence Diagram

A sequence diagram shows object interactions arranged in time sequence. It depicts the objects and classes involved in the scenario and the sequence of messages exchanged between the objects needed to carry out the functionality of the scenario. Sequence diagrams are typically associated with use case realizations in the Logical View of the system under development. Sequence diagrams are sometimes called event diagrams or event scenarios.

3.4 Entity Diagram

An entity–relationship model is usually the result of systematic analysis to define and describe what is important to process in an area of a business. It does not define the business processes; it only presents a business data schema in graphical form. It is usually drawn in a graphical form as boxes (entities) that are connected by lines (relationships) which express the associations and dependencies between entities. An ER model can also be expressed in a verbal form, for example: one building may be divided into zero or more apartments, but one apartment can only be in one.

6. Testing

Software Testing is evaluation of the software against requirements gathered from users and system specifications. Testing is conducted at the phase level in software development life cycle or at module level in program code. Software testing comprises of Validation and Verification.

- **Unit Testing**

While coding, the programmer performs some tests on that unit of program to know if it is error free. Testing is performed under white-box testing approach. Unit testing helps developers decide that individual units of the program are working as per requirement and are error free.

- **Integration Testing**

Even if the units of software are working fine individually, there is a need to find out if the units if integrated together would also work without errors. For example, argument passes and data updating etc.

- **System Testing**

The software is compiled as product and then it is tested. This can be accomplished using one or more of the following tests:

- **Functionality testing**

Tests all functionalities of the software against the requirement.

- **Performance testing**

This test proves how efficient the software is. It tests the effectiveness and average time taken by the software to do desired task. Performance testing is done by means of load testing and stress testing where the software is put under high user and data load under various environment conditions.

- **Acceptance Testing**

When the software is ready to hand over to the customer it must go through last phase of testing where it is tested for user-interaction and response. This is important because even if the software matches all user requirements and if user does not like the way it appears or works, it may be rejected.

- **Alpha testing**

The team of developer themselves perform alpha testing by using the system as if it is being used in work environment. They try to find out how user would react to some action in software and how the system should respond to inputs.

- **Beta testing**

After the software is tested internally, it is handed over to the users to use it under their production environment only for testing purpose. This is not yet the delivered product. Developers expect that users at this stage will bring minute problems, which were skipped to attend.
